We will discuss 4 main questions (and we will use the attached survey data in our conversation.)

- How might we employ survey data in the decision-making process going forward? This will include a very concrete discussion of the current system - mechanisms in place - that could be used to do this systematically.

- As you look at the draft "Presentation - QEP Survey" attachment - are there specific aspects that you find useful? Any particularly meaningful - and if so why?

- How might you change / grow the "Four Questions for Discussion" included there on the second to last slide?

- How might we design the survey data analysis and report so that it is meaningful and easily used?
