AVERAGE AGE - two measures are utilized in the Statistical History to determine the average age. The MEAN age is obtained by computing the arithmetic average of all the Valencia students' ages. The MEDIAN age is obtained by creating a list of the ages of all the students in numerical order. The total number of students is divided by 2. The resulting quantity (rounded up to the next integer value if necessary) will be called position X. Starting from either end of the list and counting up or down to X, the middle age is found, corresponding to position X. That is the MEDIAN. For example, if there were 7 students and the list of their ages looked like this: 17 17 18 18 18 19 19, the median would be 18 (the second of the three 18's, in the fourth, or middle, position).
